Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

1. Claims 14-41 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-15 of prior U.S. Patent No. 6603391. This is a double patenting rejection. Pending claims 14-41 correspond numerically to patented claims 1-15 (6603391).

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 42-48, 63-69, 71-74, 76 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Selecting a phase shift angle from a plurality of phase shift angles is not clearly described in the specification as originally filed.

3. Claims 49-53,56-62,64-69,71-74 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Support could not be found in the specification as originally filed to provide sufficient description of the elements in these claims. Furthermore, the applicant has not pointed out support for such claims in the amendment.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 54-55,63,70,75-78 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hasegawa (5355519) and Baldwin (4075632).

The difference between the invention of the claims and the Hasegawa reference is the use of the phase shifter in an interrogation system.

Baldwin teaches the use of a phase shifter in the interrogator of a backscatter communication system. See figure 2 and description of the

Art Unit: 2635

modulation techniques including col. 5 lines 5+. This permits the use of phase modulation in a transponder interrogation system.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have used the phase shifter of Hasegawa in the interrogator of Baldwin to permit the use of phase modulation in the interrogation system.
